The Truliant® instrumentation was designed to offer a versatile system that accommodates a range of techniques through intuitive products that provide enhanced accuracy and precision. Blending beautiful design and technology, Truliant was developed to provide surgeons an efficient and more reproducible intraoperative experience. The instrumentation has been honored by highly recognized industrial design institutions, earning a Silver Medical Design Excellence Award (MDEA), Bronze International Design Excellence Award (IDEA) and a German Design Award.

**Experience the power of Truliant.**

## Truliant Distal Femoral Alignment Guide

### Features:

- Ability to fine-tune your distal resection depth in 1mm increments and varus/valgus angle by 1 degree adjustments
- Compatibility across the entire Truliant Knee System, including the ExactechGPS computer-assisted surgery

Watch the assembly  
of this instrument.

## Truliant Tibial Tamp Guide

### Features:

- Ergonomically designed with a textured grip for enhanced handling
- Single instrument allows for preparation of all size tibial tray options designed for improved intraoperative efficiency

*“The Truliant instrumentation represents a quantum advance blending design features that are intuitive and provide tactile feedback allowing surgeons to achieve the desired pre-operative alignment.”*

—Tomas Nemickas, MD  
Clinical Consultant

of this instrument.

## Truliant A/P Sizer

### Features:

- Accommodates both anterior and posterior referencing techniques in a single instrument for increased intraoperative efficiency and reduced inventory
- Ability to adjust external rotation in one-degree increments up to 7 degrees

*“In my experience, the Truliant anterior referencing femoral sizer allows for accurate sizing of the femur. This is just one feature of the Truliant Knee System that truly sets Exactech apart in the industry.”*

—Michael Dayton, MD  
Clinical Consultant

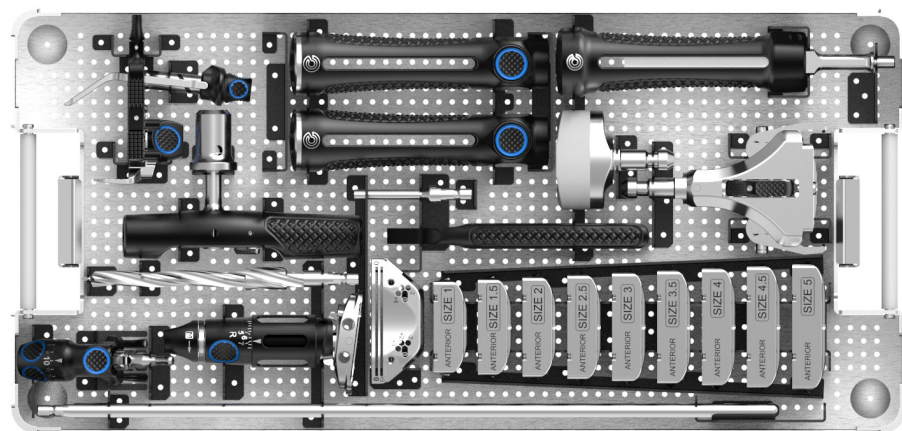

# Truliant Modular Femoral Trial

## Features:

- Allows for a simple transition from CR to PS with its modular design
- Proportional, single-step cylindrical notch preparation designed for efficiency and reproducibility
